

Plug-in Switch Module

A simple solution for wireless control through any standard outlet.

Controlling lamps and electronics in any room is simple when you use the Plug-In Switch Module. The module uses radio frequency technology to communicate wirelessly with other EnOcean-based devices and provide convenient control of lighting and electronic appliances. Simply plug the module into any standard outlet and then plug the lamp or other electronic device into the receptacle on the opposite end. Link the module to a switch or occupancy sensor for convenient wireless control.

Features & Benefits

- **Interoperable.** Communicates wirelessly with other devices using the EnOcean wireless standard.
- Male plug for power input is compatible with any standard NEMA outlet.
- Female plug for controlled output is compatible with standard male plugs.
- Two molded buttons with LED indicator lights can be used to configure or manually control the device.
- Optional mounting plate can be used to install on a wall for more secure placement.
