EnOcean

Join an Open, Interoperable Industrial IoT Ecosystem

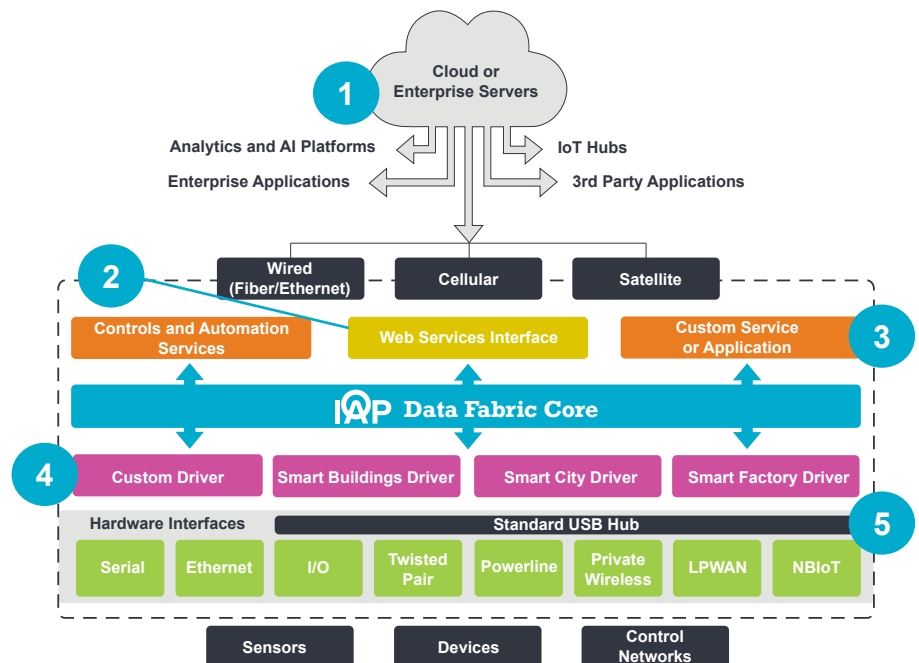

SmartServer IoT Edge Server built on open standards

Not just buzzwords – truly open and interoperable:

1. Secure access from any cloud or enterprise application

2. Standardized web service APIs for IoT data

3. Open platform for custom application development

4. Open library for custom drivers for any IoT communications protocol

5. Standard USB hub for connecting modular hardware interfaces

Please see ecosystem diagram on page 2.

SmartServer™ IoT's extensible architecture prevents lock in at every level

Built on foundation of open hardware and software standards, SmartServer IoT is an extensible platform with free-to-use open APIs that ensure data belongs to you, preventing lock in to proprietary IoT networks, software suites or vendor ecosystems. Our novel architecture not only provides cross-M2M protocol communication, but also interoperability with modern edge and cloud infrastructure so you are always ready for the future.
