

Revolutionize Industrial Automation with SmartServer IoT

Unlock the full potential of your industrial systems with SmartServer IoT.

Designed to seamlessly integrate legacy devices with emerging IoT technologies, this powerful solution combines edge and cloud connectivity, open systems providing real time data exchange of smart building data with advanced AI and building energy optimization systems.

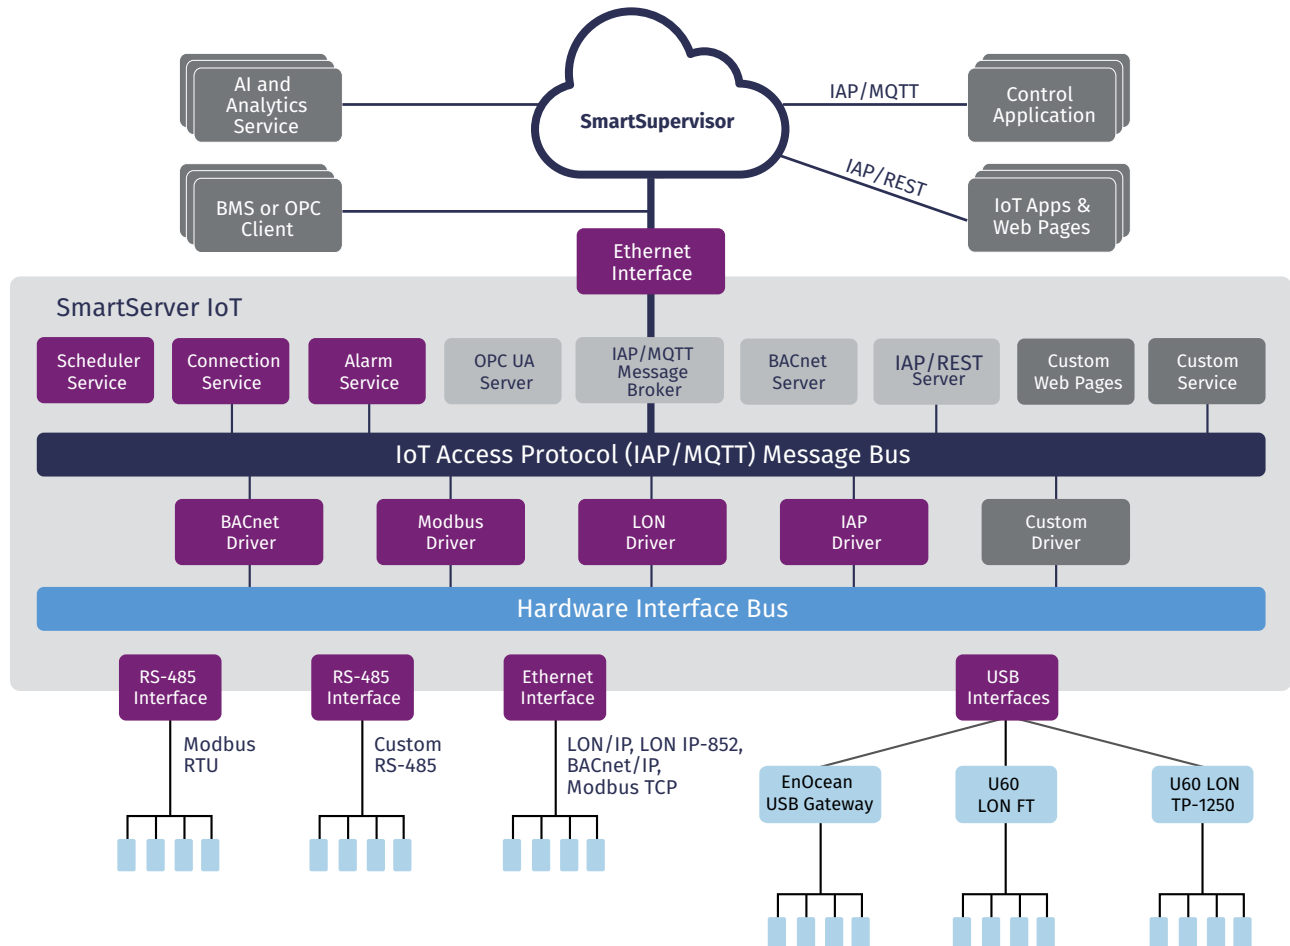

Whether you're modernizing existing systems or deploying new applications, SmartServer IoT simplifies integration, accelerates deployment, and delivers actionable insights to transform your operations.

SmartServer IoT KEY FEATURES:

- **Integration of Legacy and IoT Systems:** Connect existing industrial devices with IoT sensors and analytics for enhanced efficiency and ROI.
- **Open Standards and Protocols:** Supports BACnet, Modbus, LON, and open APIs for seamless device and data integration.
- **Cloud and Edge Connectivity:** Interfaces like MQTT, REST, BACnet/IP, and OPC UA enable connection to cloud services and supervisory systems.
- **Simple Management:** User-friendly web-based front end simplifies complex integrations and accelerates deployment. SmartSupervisor is available for centralized management of large deployments.
- **Multi-Protocol Support:** Simultaneous connectivity to BACnet, Modbus, and LON devices.
- **Flexible APIs:** REST for web dashboards and MQTT for IoT, AI, and building energy usage optimization applications.

SYSTEM ARCHITECTURE

BENEFITS FOR SOLUTION INTEGRATORS:

- Access and analyze edge device data.
- Streamline system integration and maximize legacy investments.
- Deliver predictive and performance-optimized solutions.
- BACnet certification verifies that SmartServer meets rigorous international standards for building automation and control networks.

COMPANION MODULES:

- EnOcean USB 300, USB 400, or USB 500.
- U60 modules for USB interfaces to LON FT or TP-1250.
